

French Curriculum

Early academic learning within the context of a well-tailored French immersion programme represents the cornerstone of a Inventiveminds Kidz education. We capitalize on a child's heightened sensitivity to learning in the younger grades (30 months- Senior Kindergarten) with a programme that focuses on language and mathematics. We utilize the Ontario Curriculum as a base, our teachers bring so much more to their classrooms. They are specialists in their subjects, and as such, are experts in their field, bringing unique passion and richness to their teaching.

Children receive all-day instruction in a French immersion setting by teachers carefully selected from the French-speaking world. This early exposure to language, mathematics, science and music gives young minds the stimulation craved by children precisely at the time when they are most receptive to learning—when the brain can absorb new experiences like a sponge absorbs water. The results? This early, constant exposure to their non-first (i.e., non-maternal) language allows children to reach a remarkable level of verbal and written fluency in a relatively short period of time.
